

UTILISATION OF LONG-ACTING REVERSIBLE CONTRACEPTION

Long-acting reversible contraception (LARC) including intrauterine devices (IUDs) and implants are one of the most effective forms of reversible contraception, with a reported failure rate of <1%.¹

LARC uptake in women aged 15-44 years in 2018:

- 11%** ← used LARC as a method of contraception (excluding copper IUDs)¹
- 6%** ← used a hormonal IUD¹
- 5%** ← used an etonogestrel implant¹

LARC USE IN HIGH INCOME COUNTRIES

Globally, approximately 19% of women of reproductive age (15-49 years) use LARCS.²

*This is the most recent publicly available data, as of January 2026.
